

Concerned Citizens of Montauk (CCOM) regularly tests waterbodies in Montauk, Amagansett, and East Hampton for the bacteria *enterococcus*. CCOM processes the water samples in the CCOM office lab and then shares the results on the Surfriider Foundation’s Blue Water Task Force (BWTF) online portal. *Entero* levels at 104 and above are considered a risk to human health; it is often due to heavy rains, extreme high tides, and/or warm water temperatures.

Intensive monitoring and/or remediation projects are planned or in place at the locations marked with an asterisk (*)

Georgica Pond sites are currently being processed by Surfriider at the Stonybrook Southampton Lab

Concerned Citizens of Montauk (CCOM), in partnership with the Gobler Lab at Stony Brook Southampton, monitors Fort Pond for toxic blue-green harmful algal blooms (cyanobacteria). CCOM delivers samples to the Lab, which shares bloom occurrences online through the DEC HAB Notification page. Blue-green levels at 20ug/L and above are at high risk of a bloom and triggers toxicity testing; DEC considers a concentration of 25ug/L and above as a bloom.

LOCATION	BLOOM STATUS	BLUE-GREEN LEVEL	INDICATION OF
Fort Pond: Industrial	Bloom	30.59	High Risk
Fort Pond: Ramp	Bloom	33.55	High Risk
Big Reed Pond	No Bloom	1.29	Low Risk
