

**Concerned Citizens of Montauk (CCOM)** regularly tests waterbodies in Montauk, Amagansett, and East Hampton for the bacteria *enterococcus*. CCOM processes the water samples in the CCOM office lab and then shares the results on the Surfriider Foundation’s Blue Water Task Force (BWTF) online portal. *Entero* levels at 104 and above are considered a risk to human health; it is often due to heavy rains, extreme high tides, and/or warm water temperatures.

**Intensive monitoring and/or remediation projects are planned or in place at the locations marked with an asterisk (\*)**

**Concerned Citizens of Montauk (CCOM)**, in partnership with the Gobler Lab at Stony Brook Southampton, monitors Fort Pond for toxic blue-green harmful algal blooms (cyanobacteria). CCOM delivers samples to the Lab, which shares bloom occurrences online through the NYS DEC HAB Notification page. Blue-green levels at 20ug/L and above are at high risk of a bloom and triggers toxicity testing; DEC considers a concentration of 25ug/L and above as a bloom.
