

Concerned Citizens of Montauk (CCOM) partners with the Surfrider Foundation Eastern Long Island Chapter and Peconic Baykeeper to monitor East End water bodies for the bacteria enterococcus. CCOM tests locations in Montauk, Amagansett, and East Hampton, processes the water samples in the CCOM office lab and shares the results with the public through press releases and the Surfrider Foundation’s Blue Water Task Force (BWTF) online portal. Entero levels at 104 and above are considered a risk to human health. We detected high levels of bacteria at several sites this week, likely due to a combination of rain, warm weather, and the full moon high tide. We are working jointly with the Town to perform additional testing and remediation efforts. Levels <10 are considered below the detection limit of the test.

Concerned Citizens of Montauk (CCOM), in partnership with the Gobler Lab at Stony Brook Southampton, monitors Fort Pond and Big Reed Pond for toxic blue-green algal blooms (cyanobacteria). CCOM delivers samples to the Lab, which shares bloom occurrences online through the NYS DEC HAB Notification page. Blue-green levels at 20ug/L and above are at high risk of a bloom and triggers toxicity testing; DEC considers a concentration of 25ug/L and above as a bloom.

LOCATION	BLOOM STATUS	BLUE-GREEN LEVEL	INDICATION OF
Fort Pond: Industrial	No Bloom Present	0.75 ug/L	Low Risk
Fort Pond: Ramp	No Bloom Present	1.33 ug/L	Low Risk
