

Concerned Citizens of Montauk (CCOM) partners with the Surfrider Foundation Eastern Long Island Chapter and Peconic Baykeeper to monitor East End water bodies for the bacteria enterococcus. CCOM tests locations in Montauk, Amagansett, and East Hampton, processes the water samples in the CCOM office lab and shares the results with the public through press releases and the Surfrider Foundation’s Blue Water Task Force (BWTF) online portal. Entero levels at 104 and above are considered a risk to human health. High levels are often due to heavy rains, extreme high tides, and/or warm water temperatures. Levels <10 are considered below the detection limit of the test, and levels >24,196 are higher than what the test can detect. *Intensive monitoring and/or remediation projects are planned or in place at the locations marked with an asterisk (\*)*.

Concerned Citizens of Montauk (CCOM), in partnership with the Gobler Lab at Stony Brook Southampton, monitors Fort Pond and Big Reed Pond for toxic blue-green algal blooms (cyanobacteria). CCOM delivers samples to the Lab, which shares bloom occurrences online through the NYS DEC HAB Notification page. Samples with blue-green levels at 20ug/L and above indicate the water body is at high risk of a bloom and are therefore tested for toxins. The Department of Environmental Conservation (DEC) considers a concentration of 25ug/L and above as a bloom.

<b>Fort Pond: Industrial</b>	<b>Bloom Present</b>	<b>25.0</b>	<b>High Risk</b>
<b>Fort Pond: Ramp</b>	<b>Bloom Present</b>	<b>27.2</b>	<b>High Risk</b>
